

SÉMINAIRE MATÉRIALITÉS DU NUMÉRIQUE

Sanctions, Standards, and Sovereignty: Examining Power in Communication Networks with Infrastructural Ideologies

Despite ever-increasing discourse about internet fragmentation and digital sovereignty, the world has never been more digitally connected. At the same time, information networks are continuously being reconfigured by states and corporations at different layers of the stack.

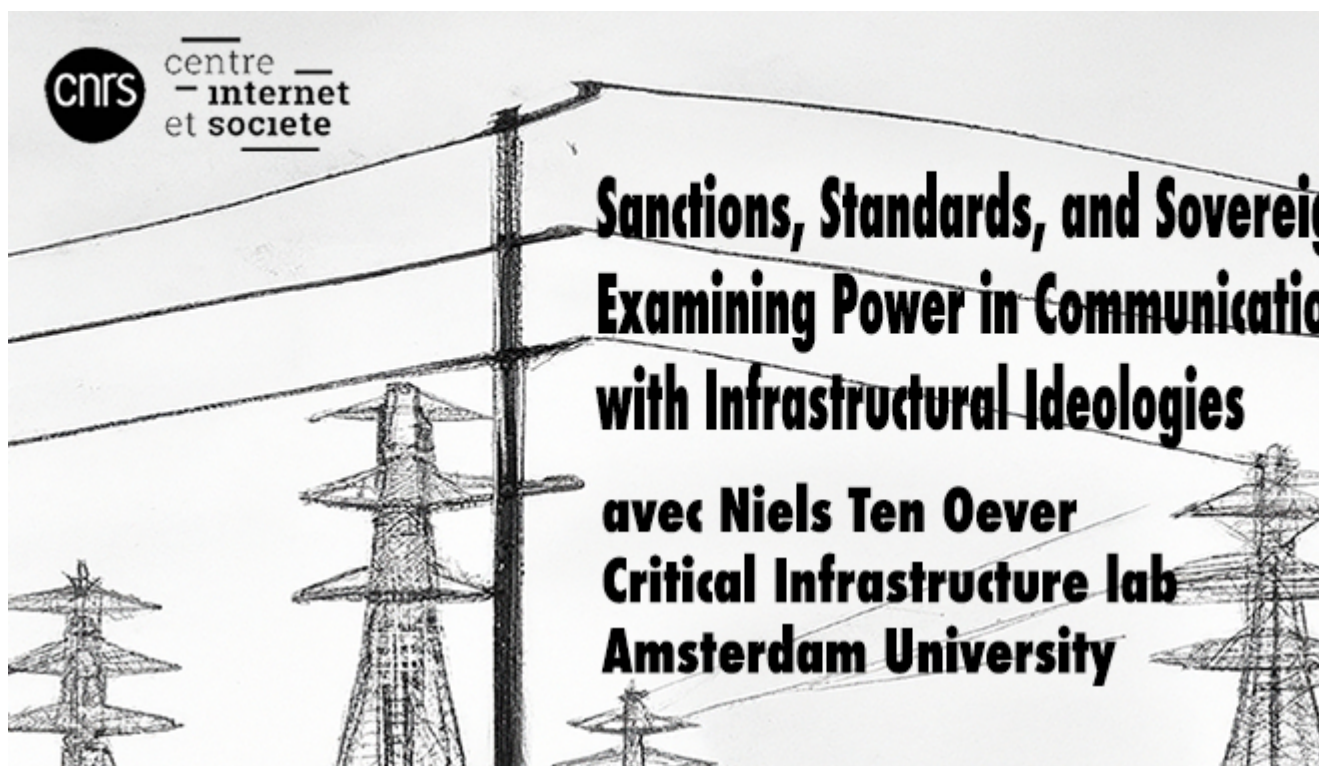

Taking this into account, what methods and theoretical approaches can be levered to analyze power in communication networks today? In this talk we will analyze the implementation of EU sanctions against Russian media, and the development of 5G and internet standards to see how the developing framework of infrastructural ideologies can help us understand the shaping of global communication infrastructures while taking the political and the material into account.

INTERVENANT

Niels Ten Oever, *assistant professor* à l'université d'Amsterdam et membre du Critical Infrastructure Lab

ORGANISATEURS

Séminaire ouvert à tous et toutes organisé par le groupe de travail Matérialités du numérique, hébergé au sein du Centre Internet & Société (CNRS), coordonné par Adrien Tournier (HT2S, Cnam) Valentin Goujon (Medialab, Sciences-Po) et Hugo Estecahandy (Geode, Paris 8).

26 avril 2024
16h - 18h

Cnam, 2 rue Conté, Paris 3^e

Salle 30.1.24 (via l'accès 30 au sous-sol)
